Muwoni Converter

Convert, compress and organize supported files on your Windows computer.

WHAT THIS APP DOES

Choose files, select the tool you need, then download the finished result. The Windows app uses its included local engines and does not need a CloudConvert key.

INSTALL ONCE

1

Extract the download ZIP

Keep all files together, then open Muwoni-Converter-Setup-1.0.0-x64.exe.

2

Run the setup

Choose an install location. The installer creates shortcuts in Start and on the Desktop.

3

Open Muwoni Converter

Use the shortcut. The first start prepares its local tools.

USE IT

1

Choose a tool

Use Converter, Compress, Watermark, Merge, Website Capture, Thumbnail, Archive or Metadata.

2

Add local files

Drop files into the app or use the picker. Choose an output format or tool setting.

3

Start and download

Wait for Finished, then select Download. Close or hide completion pop-ups when finished.

IMPORTANT NOTES

- Most local file operations work offline. Website capture needs internet to reach a public URL.
- Speed and practical file size depend on the computer memory, storage and the source file.
- Use only files you own or are authorized to process. Some formats have technical limits.
